Ending the HIV Epidemic: Southeast HIV Youth Summit

Office of Infectious Disease and HIV/AIDS Policy (OIDP) CAPT John Oguntomilade, BDS, MPH, PhD Region 4 OIDP PACE Program Director

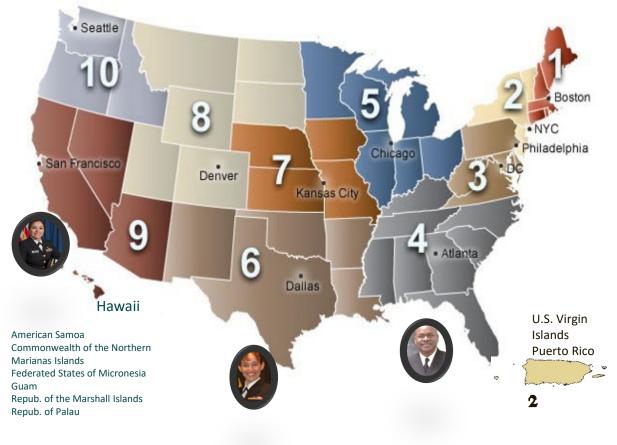

Ending the HIV Epidemic in the U.S.

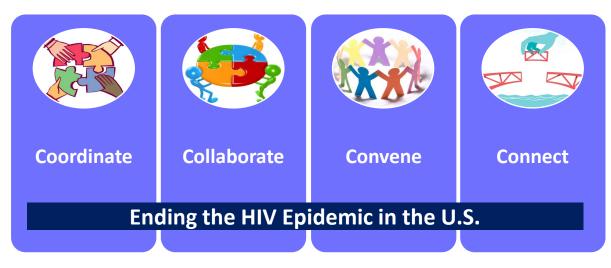

Prevention Through Active Community Engagement (PACE) Program

 Prioritize the three HHS regions that have a substantial burden of new HIV diagnoses

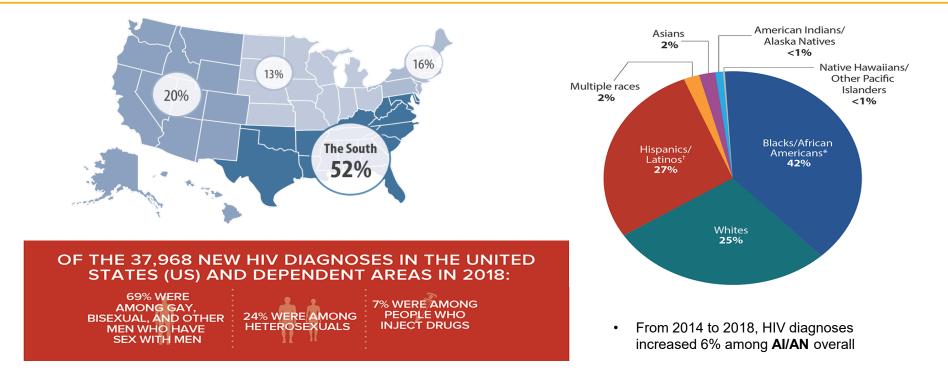

PACE

- Serve as OIDP Lead for "Ending the HIV Epidemic" in the regions
- Bridge the gap between community and federal programs

Demographics of the HIV Epidemic

- African Americans accounted for 42% of HIV diagnoses and 13% of the population
- Hispanics/Latinos accounted for 27% of HIV diagnoses and 18% of the population

National HIV/AIDS Strategy (2022-2025) update

NATIONAL HIV/AIDS STRATEGY

for the United States 2022–2025

* * * * *

In 2019 Disparities among men

- Gay and bisexual men account for 66% of new HIV diagnosis despite accounting for only 2% of the population
- 26% of new HIV infections were among Black gay and bisexual men
- 23% of new cases are among Latino gay and bisexual men
- 45% of new cases were among gay and bisexual men under the age of 35

Disparities persist among women (2019)

- Black women are disproportionately affected compared to women of other races/ ethnicities.
 - From 2015 to 2019, the rate of new HIV infections among Black women was 11 times that of White women and 4 times that of Latina women.

Disparities by age

In 2019, youth aged 13–24 years composed 21% of the new HIV diagnoses in the United States

National HIV/AIDS Strategy—Priority Populations

- Gay, bisexual, and other men who have sex with men, in particular Black, Latino, and American Indian/Alaska Native men
- Black women
- Transgender women
- Youth aged 13–24 years
- People who inject drugs

Prioritized based on incidence, diagnoses, and viral suppression data
