

# ABC's of ART: Designing Initial Antiretroviral Regimens for Beginners

**Elizabeth Sherman, PharmD, AAHIVP**

Associate Professor, Nova Southeastern University  
Division of Infectious Disease, Memorial Physician Group  
Faculty, Southeast AIDS Education and Training Center

# Learning Objectives

By the end of this session, each participant will:

- List antiretroviral treatment goals and tools for achieving these goals
- Describe the process for selecting antiretroviral regimens for treatment-naive individuals with HIV
- Identify common mechanisms for drug interactions and the importance of recognizing clinically significant drug interactions with antiretrovirals

# Disclosures

- *This speaker does not have any financial relationships with commercial entities to disclose*
- *The speaker will not discuss any off-label use or investigational product during the program*
- *This slide set has been peer-reviewed to ensure that there are no conflicts of interest represented in the presentation*
  
- *This program is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under grant number U1OHA30535 as part of an award totaling \$4.2m. The contents are those of the author(s) and do not necessarily represent the official views of, nor an endorsement, by HRSA, HHS, or the U.S. Government. For more information, please visit [HRSA.gov](https://www.hrsa.gov).*
  
- *“Funding for this presentation was made possible by cooperative agreement U1OHA30535 from the Health Resources and Services Administration HIV/AIDS Bureau. The views expressed do not necessarily reflect the official policies of the Department of Health and Human Services nor does mention of trade names, commercial practices, or organizations imply endorsement by the U.S. Government. Any trade/brand names for products mentioned during this presentation are for training and identification purposes only.”*

# HIV Attacks CD4 T Cells

- HIV attacks immune system CD4 T cells
  - T cells are a type of white blood cell
  - HIV uses T cell machinery to replicate
- Depletion of CD4 T cells by HIV impairs immune defenses (leaving host susceptible to opportunistic infection)
- Antiretroviral therapy (ART) suppresses viral load, allowing improvements in immune system functioning

# HIV Life Cycle

# Initiation of Antiretroviral Therapy (ART)

- ART recommended for all persons with HIV to reduce morbidity and mortality and to prevent HIV transmission
- Initiate ART immediately (or as soon as possible) after HIV diagnosis
  - Purpose: Increase ART uptake and linkage to care, decrease time to viral suppression, improve virologic suppression rates
- When initiating ART, educate patients on ART benefits and deploy strategies to optimize care engagement and adherence

# Goals of Antiretroviral Therapy

- Decrease HIV RNA
  - Goal HIV RNA or “viral load” <20-75 copies/mL or “undetectable”
- Increase CD4 count
  - 500-1500 cells/mm<sup>3</sup> is normal CD4 range for HIV-uninfected
  - AIDS diagnosis is CD4 < 200 or CD4% < 14% (or AIDS defining illness)
- Improve quality of life and reduce HIV-related morbidity & mortality
- Prevent HIV transmission to others

# Tools to Achieve Treatment Goals

- Performing pretreatment resistance testing
- Maximizing adherence
- Selecting individualized ART regimen

# Tools to Achieve Treatment Goals

- **Performing pretreatment resistance testing**
- Maximizing adherence
- Selecting individualized ART regimen

# Use of Drug Resistance Testing to Guide Therapy Decisions

- Drug resistance is the reduction of the sensitivity of the virus to a particular drug
- Resistance results from genetic mutation of viral enzymes & proteins leading to changes in the way drugs interact with them
- Mechanisms for ARV drug resistance
  - Transmitted resistance: Infected with a resistant strain of HIV at baseline
  - Spontaneous resistance: HIV develops mutations easily and becomes resistant
- **Obtain genotype prior to initiation of therapy to determine if resistant virus transmitted**
- Obtain resistance test if virologic failure during ART or suboptimal suppression of viral load after start of therapy to determine if spontaneous resistance occurred

# Tools to Achieve Treatment Goals

- Performing pretreatment resistance testing
- **Maximizing adherence**
- Selecting individualized ART regimen

# Adherence Interventions

- Provide an accessible, trustworthy, nonjudgmental multidisciplinary health care team
- Find resources to assist with treatment costs to maintain uninterrupted access to both ART and appointments
- Allow flexible appointment scheduling
- Assist with transportation
- Link patients to counseling to overcome stigma, substance use, or depression
- Change ART to simplify dosing or reduce side effects

care4today®

# Simplified ART Regimens

- Use of co-formulated ARV agents and once-daily dosing can reduce pill burden and simplify dosing schedules
- Simplified treatment regimens
  - Effective
  - Favored by patients and providers
  - Associated with better adherence
- Use of single tablet regimens (STRs)

# Single Tablet Regimens (STRs)

| Year of FDA Approval | Brand Name | Generic Name                                       | Antiretroviral Drug Classes |
|----------------------|------------|--|-----------------------------|
| 2006                 | Atripla    | Efavirenz/tenofovir DF/emtricitabine               | NNRTI + dual NRTI           |
| 2011                 | Complera   | Rilpivirine/tenofovir DF/emtricitabine             | NNRTI + dual NRTI           |
| 2012                 | Stribild   | Elvitegravir/cobicistat/tenofovir DF/emtricitabine | INSTI + booster + dual NRTI |
| 2014                 | Triumeq    | Dolutegravir/abacavir/lamivudine                   | INSTI + dual NRTI           |
| 2015                 | Genvoya    | Elvitegravir/cobicistat/tenofovir AF/emtricitabine | INSTI + booster + dual NRTI |
| 2016                 | Odefsey    | Rilpivirine/tenofovir AF/emtricitabine             | NNRTI + dual NRTI           |
| 2017                 | Juluca     | Dolutegravir/rilpivirine                           | INSTI + NNRTI               |
| 2018                 | Biktarvy   | Bictegravir/tenofovir AF/emtricitabine             | INSTI + dual NRTI           |
| 2018                 | Symtuza    | Darunavir/cobicistat/tenofovir AF/emtricitabine    | PI + booster + dual NRTI    |
| 2018                 | Delstrigo  | Doravirine/tenofovir DF/emtricitabine              | NNRTI + dual NRTI           |
| 2019                 | Dovato     | Dolutegravir/lamivudine                            | INSTI + NRTI                |

Key: DF = disoproxil fumarate; AF = alafenamide; NNRTI = non-nucleoside reverse transcriptase inhibitor; NRTI = nucleoside reverse transcriptase inhibitor; INSTI = integrase strand transfer inhibitor; PI = protease inhibitor

# Food Considerations with STRs

| Single Tablet Regimen<br>Brand Name | Single Tablet Regimen<br>Generic Name              | Food Considerations                    |
|-------------------------------------|--|--|
| Atripla                             | Efavirenz/tenofovir DF/emtricitabine               | Empty stomach                          |
| Biktarvy                            | Bictegravir/tenofovir AF/emtricitabine             | With or without food                   |
| Complera                            | Rilpivirine/tenofovir DF/emtricitabine             | With a full meal (not a protein drink) |
| Delstrigo                           | Doravirine/tenofovir DF/emtricitabine              | With or without food                   |
| Dovato                              | Dolutegravir/lamivudine                            | With or without food                   |
| Genvoya                             | Elvitegravir/cobicistat/tenofovir AF/emtricitabine | With food                              |
| Juluca                              | Dolutegravir/rilpivirine                           | With a full meal (not a protein drink) |
| Odefsey                             | Rilpivirine/tenofovir AF/emtricitabine             | With a full meal (not a protein drink) |
| Stribild                            | Elvitegravir/cobicistat/tenofovir DF/emtricitabine | With food                              |
| Symtuza                             | Darunavir/cobicistat/tenofovir AF/emtricitabine    | With food                              |
| Triumeq                             | Dolutegravir/abacavir/lamivudine                   | With or without food                   |

Key: DF = disoproxil fumarate; AF = alafenamide

# What exactly does empty stomach, with food, or with a full meal mean?

- Empty stomach: 1 hour before a meal or 2 hours after a meal
- With food: Within 2 hours after eating
- With a full meal: At least 390 calories

Full meal of at least 390 calories (good examples and bad examples):

# Simplified Regimen: Cabenuva (IM cabotegravir/rilpivirine)

- January 21, 2021: FDA approves long-acting injectable Cabenuva q 4 weeks
- February 24, 2021: DHHS guidelines panel recommends Cabenuva IM injections as optimization strategy for HIV+ on ART with viral suppression for  $\geq 3$  months, who—
  - have no baseline resistance to either medication,
  - have no prior virologic failures,
  - do not have active HBV infection (unless also receiving oral HBV treatment),
  - are not pregnant and are not planning on becoming pregnant, and
  - are not receiving medications with significant drug interactions with cabotegravir and rilpivirine
- February 1, 2022: FDA approves Cabenuva q 8 weeks

# Tools to Achieve Treatment Goals

- Performing pretreatment resistance testing
- Maximizing adherence
- **Selecting individualized ART regimen**

# Process for Selecting an Initial ART Regimen

- Regimen efficacy
  - Standard therapy for HIV typically consists of 2-3+ drugs from 2+ classes (no monotherapy)
- Comorbidities
  - Potential adverse effects or drug-drug interactions
- Drug resistance
  - Presence of transmitted drug resistance or development of drug resistance on failure
- Adherence potential
  - Pill burden, dosing frequency, food restrictions

# Overview of ART Drug Classes

- Classification based on where in the viral life cycle each drug acts
  - 5 Antiretroviral Classes
    - Nucleos(t)ide reverse transcriptase inhibitors (NRTI) \*
    - Integrase strand transfer inhibitors (INSTI) \*
    - Protease inhibitors (PI) †
    - Non-nucleoside reverse transcriptase inhibitors (NNRTI) †
    - Entry inhibitors ††
- \*Recommended for most people with HIV  
†Recommended in certain clinical situations  
†† Not recommended for initial therapy

# HIV Life Cycle & ARV Drug Classes

# Antiretroviral Medications

## Nucleoside Reverse Transcriptase Inhibitors (NRTIs)

Abacavir (ABC) (Ziagen®)  
Didanosine (ddI) (Videx®)  
Emtricitabine (FTC) (Emtriva®)  
Lamivudine (3TC) (Epivir®)  
~~Stavudine (d4T) (Zerit®) withdrawn 2020~~  
Tenofovir (TDF or TAF) (Viread® or Vemlidy®)  
~~Zalcitabine (ddC) (Hivid®) withdrawn 2005~~  
Zidovudine (ZDV, AZT) (Retrovir®)  
3TC/ABC (Epzicom®)  
3TC/ABC/ZDV (Trizivir®)  
3TC/ZDV (Combivir®)  
3TC/TDF (Cimduo®, Temixys®)  
FTC/TDF (Truvada®)  
FTC/TAF (Descovy®)

## Non-nucleoside Reverse Transcriptase Inhibitors (NNRTIs)

Delavirdine (DLV) (Rescriptor®)  
Doravirine (DOR) (Pifeltro®)  
Efavirenz (EFV) (Sustiva®)  
Etravirine (ETR) (Intelence®)  
Nevirapine (NVP) (Viramune®)  
Rilpivirine (RPV) (Edurant®)

## Integrase Inhibitors (INSTIs)

Bictegravir (BIC)  
Cabotegravir (CAB) (Vocabria®)  
Dolutegravir (DTG) (Tivicay®)  
Elvitegravir (EVG)  
Raltegravir (RAL) (Isentress®)

## Pharmacokinetic Enhancers “Boosters”

Cobicistat (cobi) (Tybost®)  
Ritonavir (r) (Norvir®)

## Protease Inhibitors (PIs)

~~Amprenavir (APV) (Agenerase®) discontinued 2004~~  
Atazanavir (ATV) (Reyataz®)  
Atazanavir/cobicistat (ATV/c) (Evotaz®)  
Darunavir (DRV) (Prezista®)  
Darunavir/cobicistat (DRV/c) (Prezcobix®)  
Fosamprenavir (FPV) (Lexiva®)  
Indinavir (IDV) (Crixivan®)  
Lopinavir/ritonavir (LPV/r) (Kaletra®)  
Nelfinavir (NFV) (Viracept®)  
Ritonavir (RTV) (Norvir®)  
Saquinavir (SQV) (Invirase®)  
Tipranavir (TPV) (Aptivus®)

## Entry Inhibitors

Enfuvirtide (ENF, T20) (Fuzeon®)  
Ibalizumab (Trogarzo®)  
Maraviroc (MVC) (Selzentry®)  
Fostemsavir (Rukobia®)

## Single Tablet Regimens

BIC/FTC/TAF (Biktarvy®)  
DRV/cobi/FTC/TAF (Symtuza®)  
DTG/3TC/ABC (Triumeq®)  
DTG/RPV (Juluca®)  
DTG/3TC (Dovato®)  
DOR/3TC/TDF (Delstrigo®) CAB/RPV (Cabenuva®)  
EFV/FTC/TDF (Atripla®)  
EFV/3TC/TDF (Symfi® or Symfi Lo®)  
EVG/cobi/FTC/TAF (Genvoya®)  
EVG/cobi/FTC/TDF (Stribild®)  
RPV/FTC/TAF (Odefsey®)  
RPV/FTC/TDF (Complera®)

## Long Acting Injectable

# Initial HIV Management Principles

- Initiate ART with 1 of 3 types of regimens
- Most regimens should include **2 NRTIs plus 1 drug from a separate class:**
  - 1-2 NRTIs + 1 INSTI\*
  - 2 NRTIs + 1 PI (boosted PI) †
  - 2 NRTIs + NNRTI †

\*Recommended for most patients

†Recommended in certain clinical situations

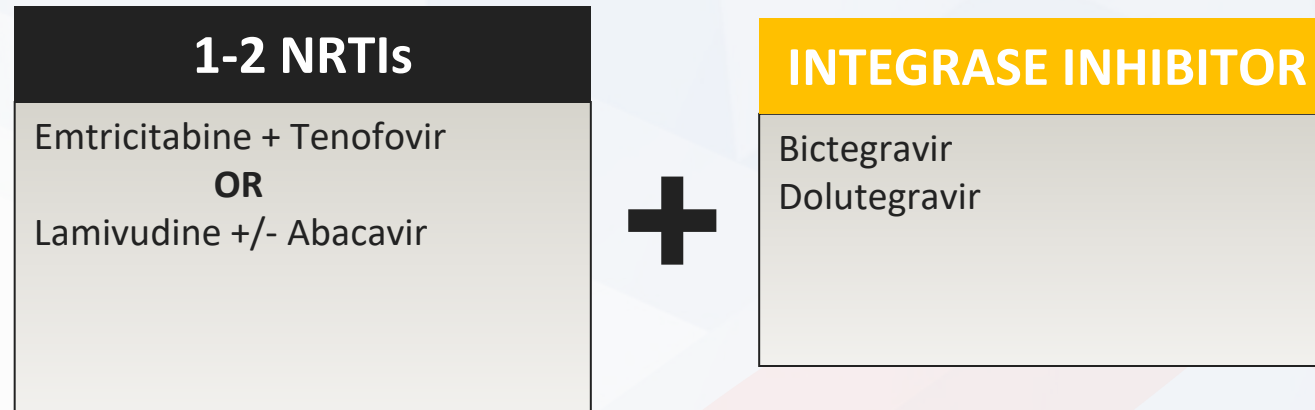

# Boosting a Protease Inhibitor (PI) With Ritonavir or Cobicistat

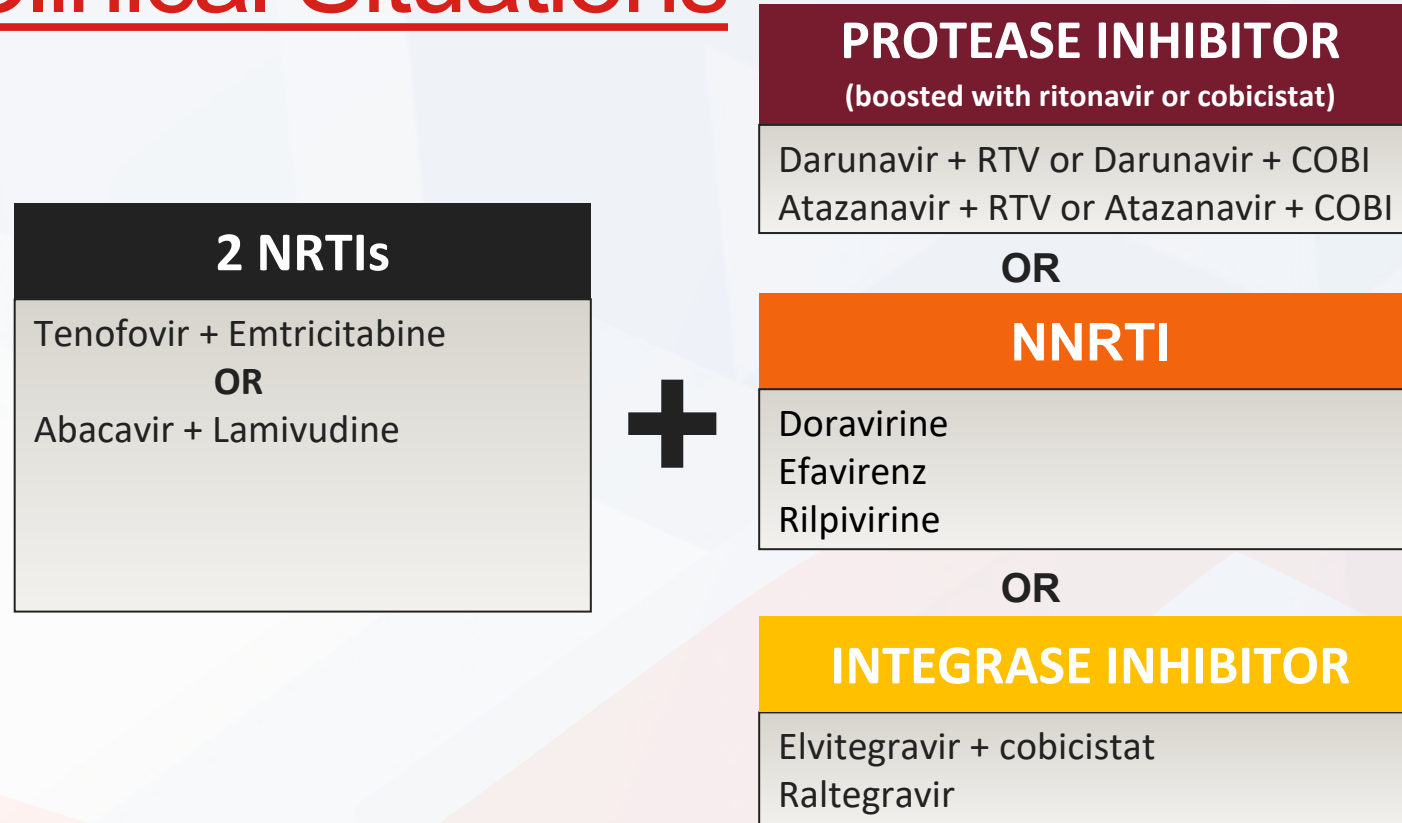

# Recommended Initial Regimens for Most People with HIV

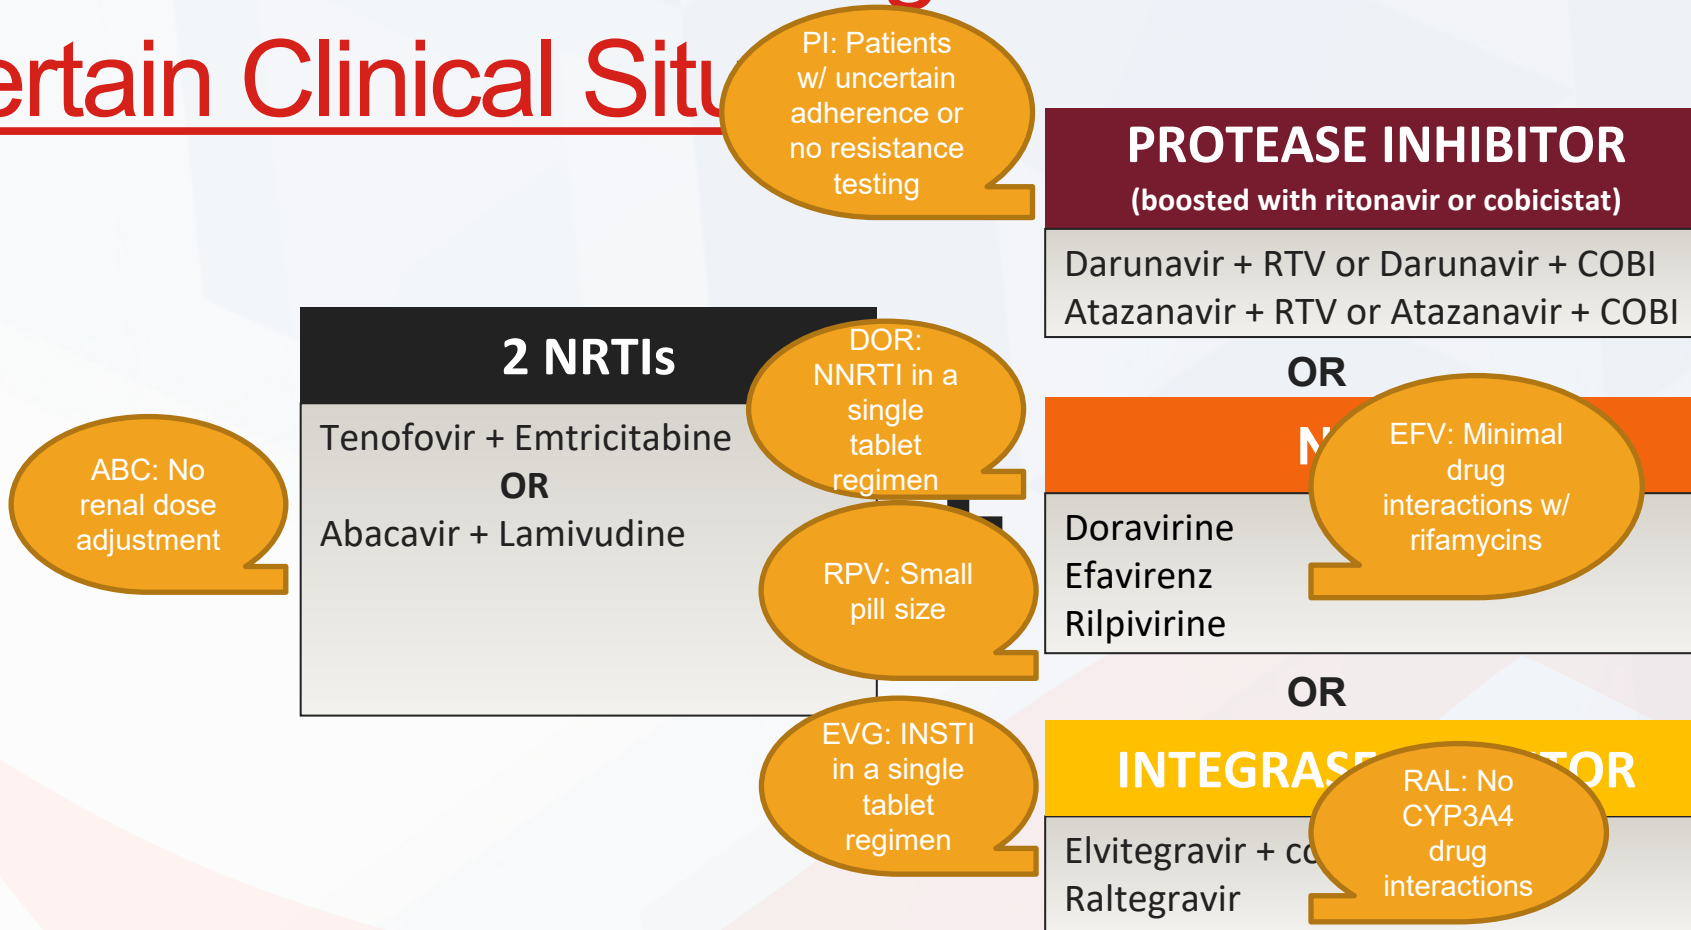

Tenofovir alafenamide (TAF) and tenofovir disoproxil fumarate (TDF) are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended Initial Regimens in Certain Clinical Situations

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended Initial Regimens in Certain Clinical Situations

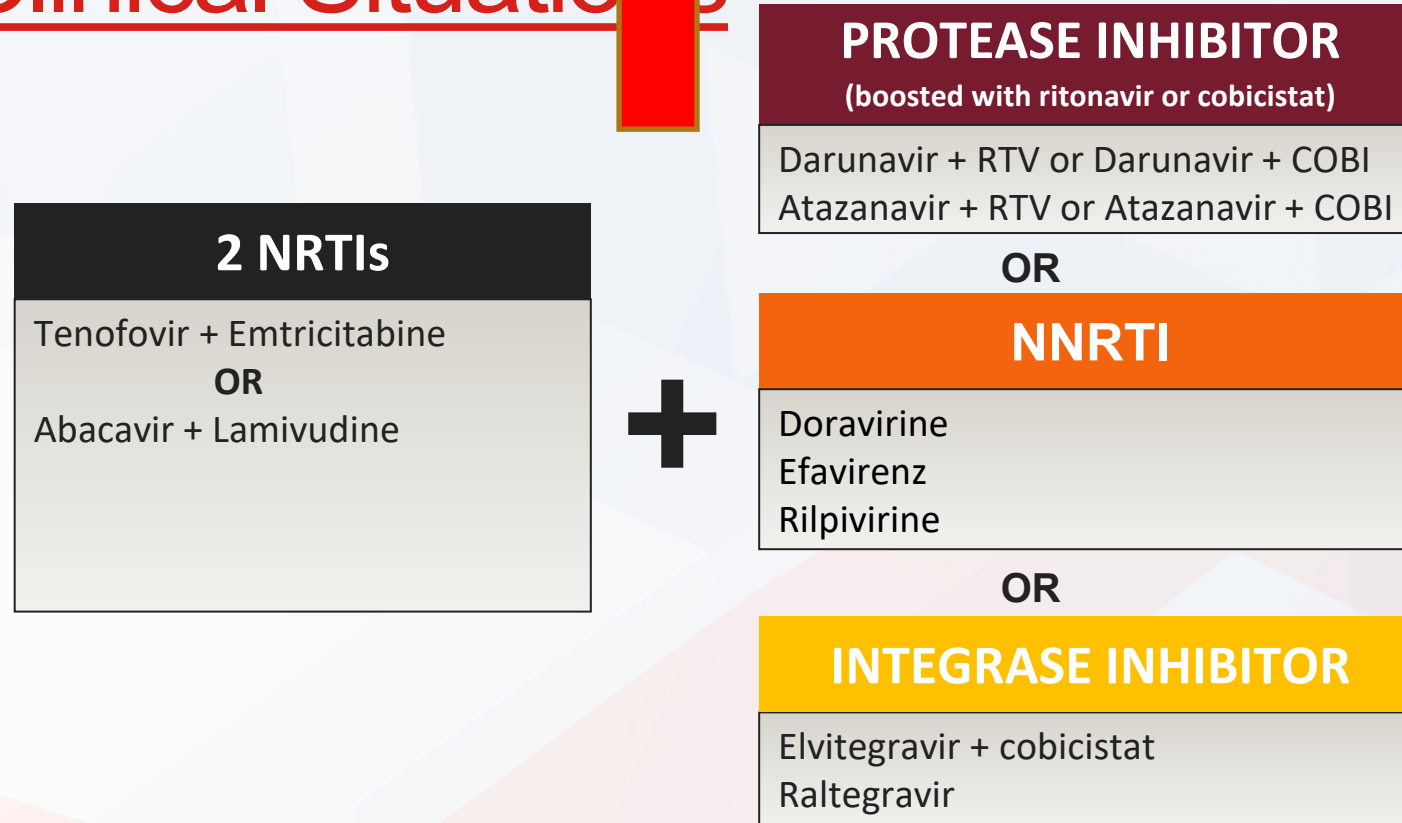

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Selecting an Initial HIV Regimen: The “Chinese Food Rule”

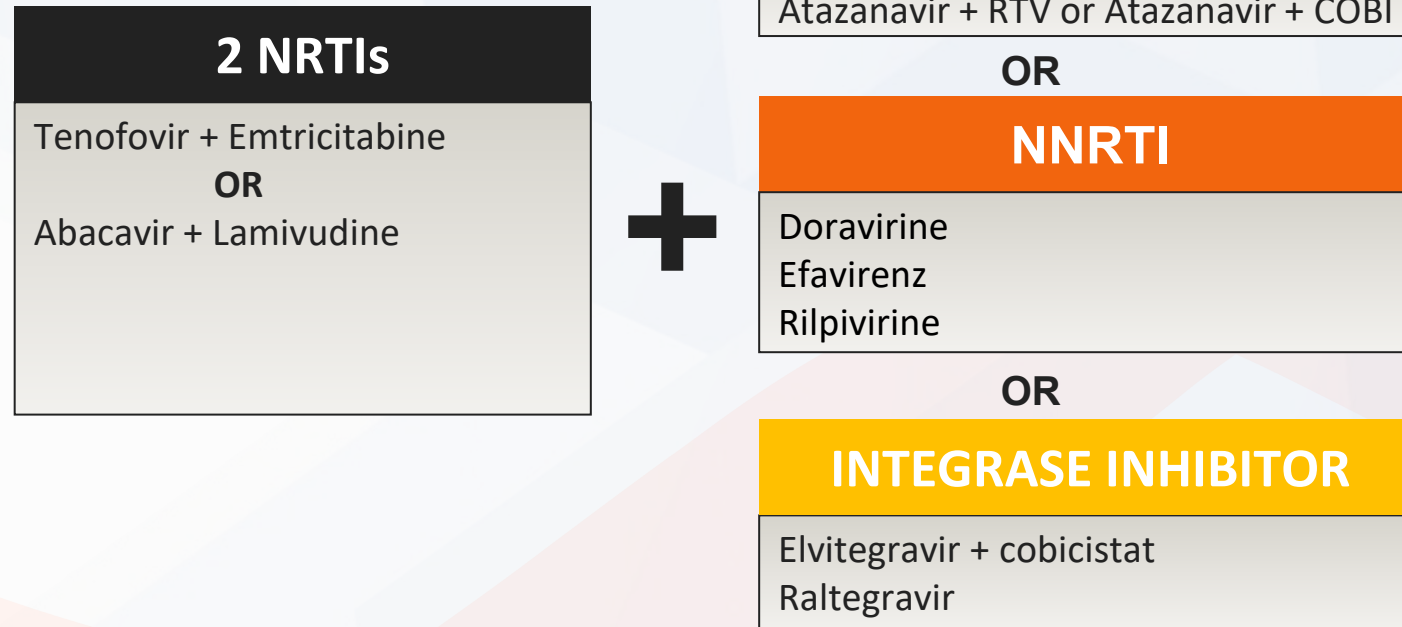

# Recommended Initial Regimens in Certain Clinical Situations

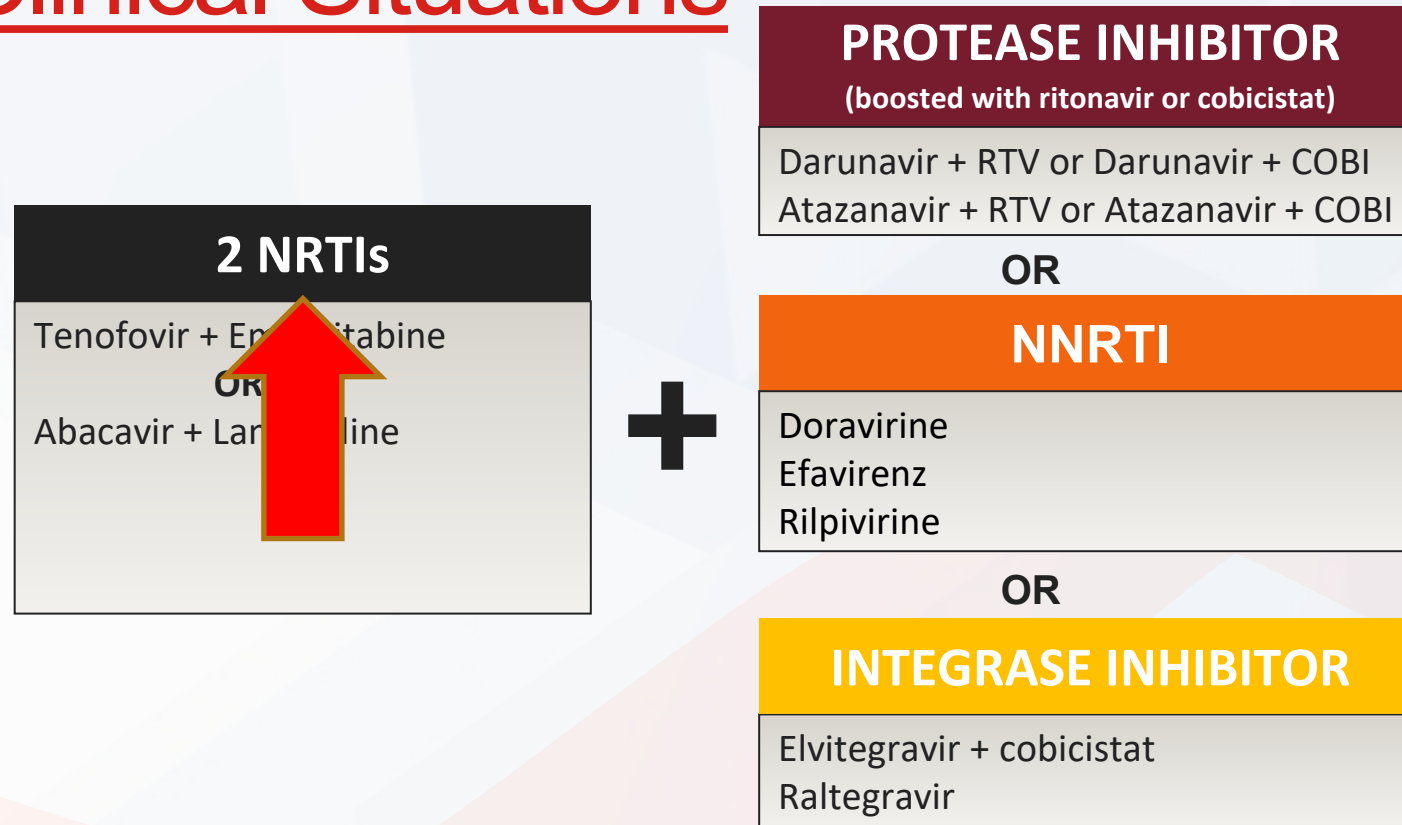

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended Initial CHINESE FOOD in Certain Clinical Situations

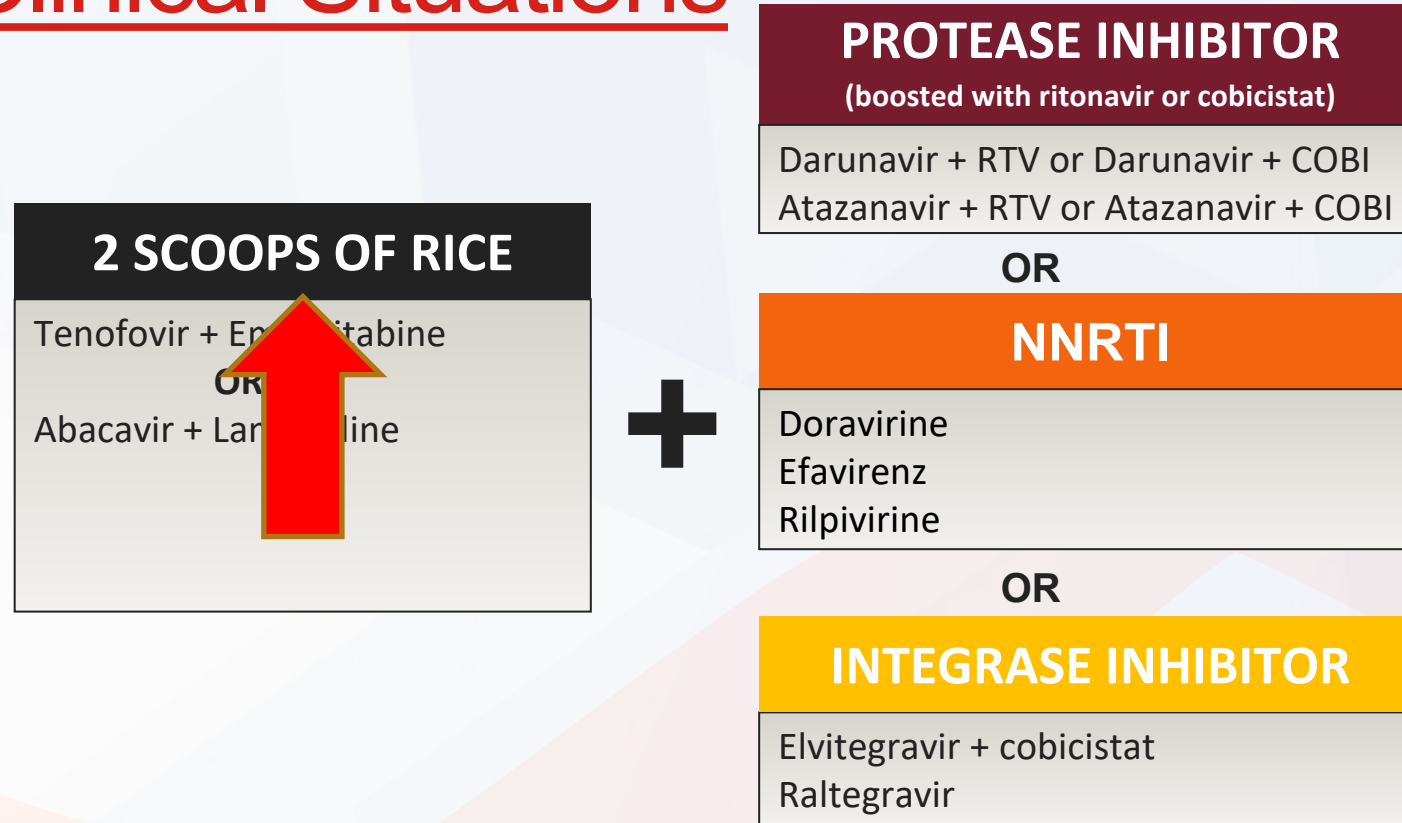

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended Initial CHINESE FOOD in Certain Clinical Situations

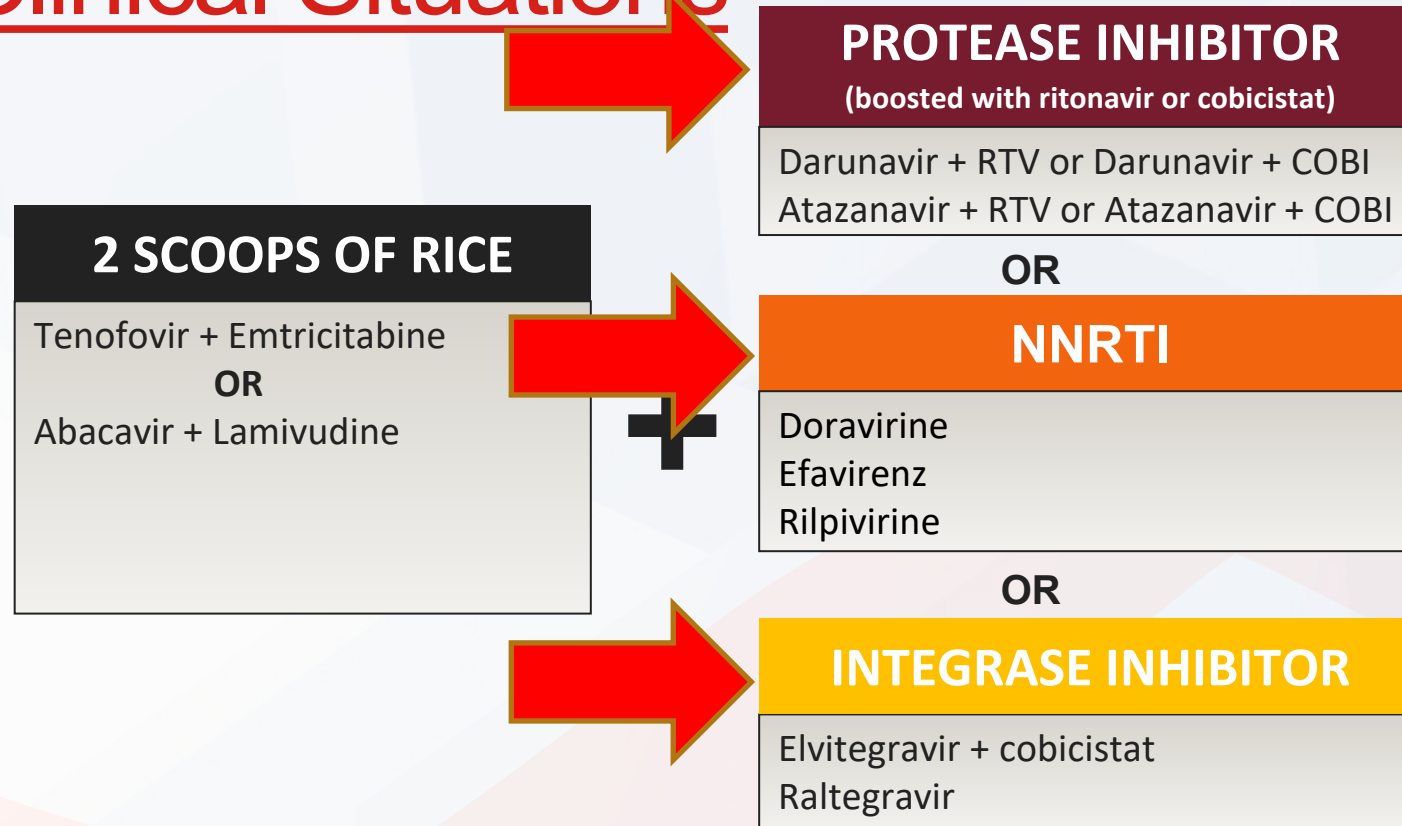

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended Initial CHINESE FOOD in Certain Clinical Situations

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

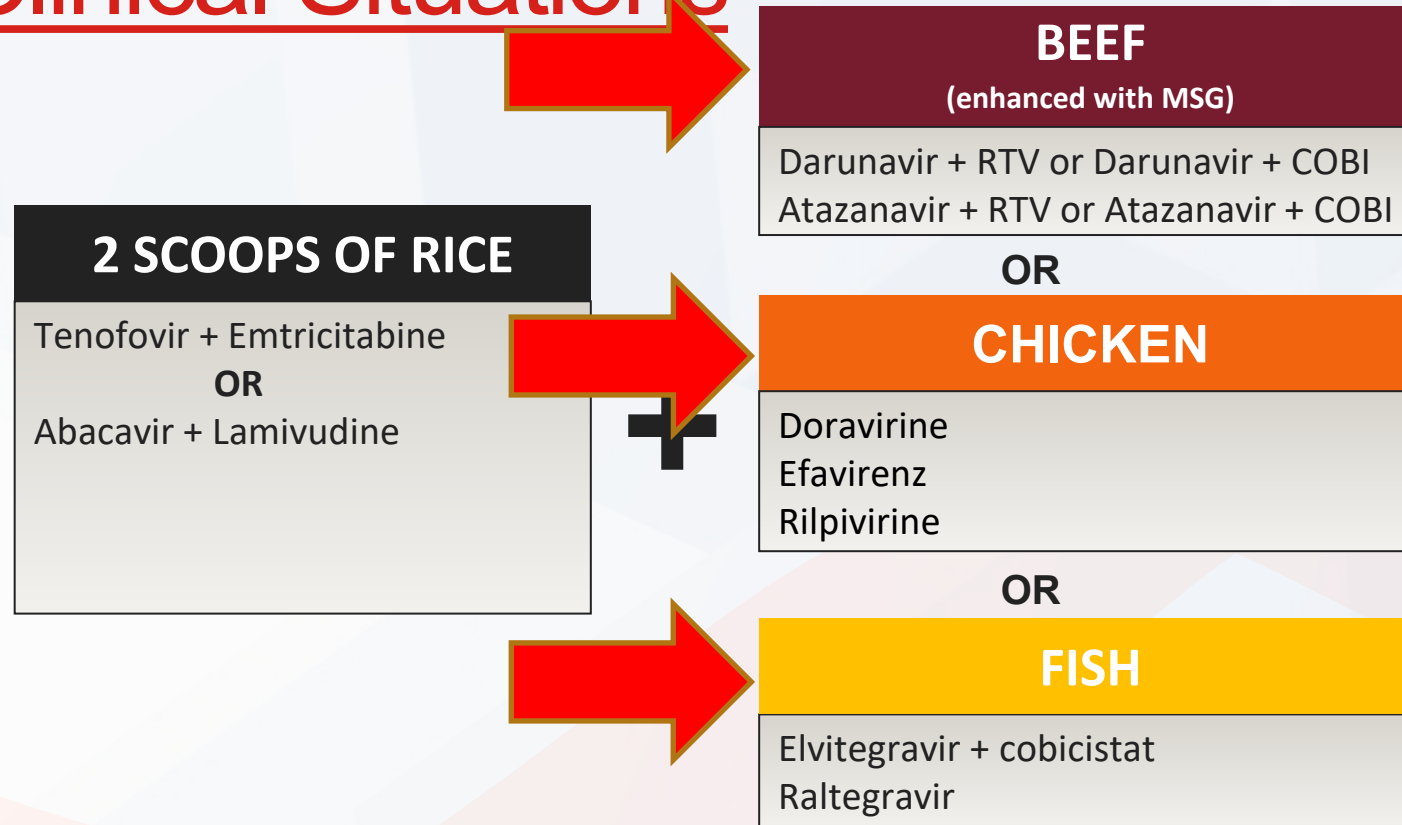

# Recommended Initial CHINESE FOOD in Certain Clinical Situations

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

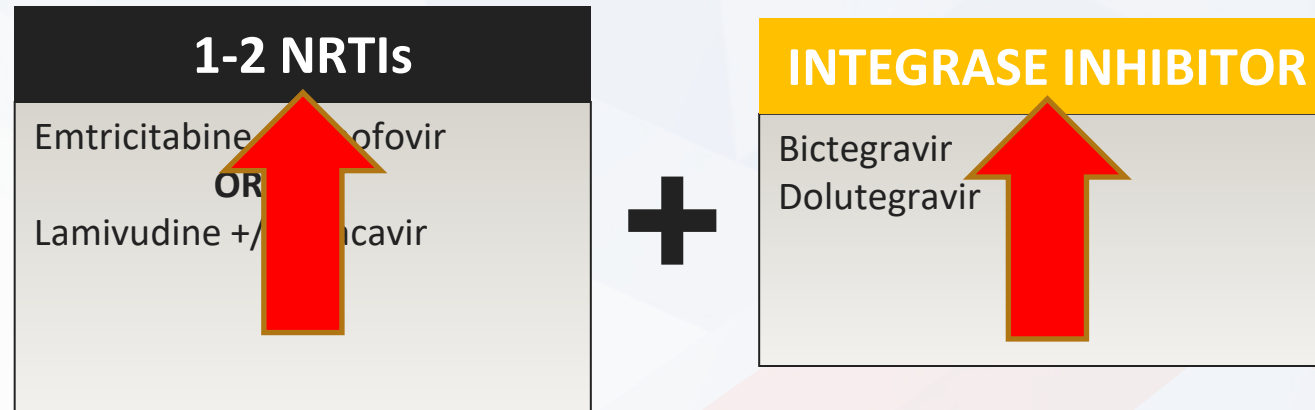

# Recommended Initial CHINESE FOOD in Certain Clinical Situations

TAF and TDF are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended Initial Regimens for Most People with HIV

Tenofovir alafenamide (TAF) and tenofovir disoproxil fumarate (TDF) are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# Recommended CHINESE FOOD for Most People with HIV

Tenofovir alafenamide (TAF) and tenofovir disoproxil fumarate (TDF) are two forms of tenofovir approved by the FDA. TAF has fewer bone and kidney toxicities than TDF, while TDF is associated with lower lipid levels. Safety, cost, and access are among the factors to consider when choosing between these drugs.

# HIV Regimen / Chinese Food Selection: A Stepwise Approach

## 1. Get 1-2 scoops of rice

- Choose 2 NRTIs, co-formulated when possible
  - Example: Tenofovir + emtricitabine
  - Example: Abacavir + lamivudine
- Only one regimen uses 1 NRTI (lamivudine + dolutegravir)

## 2. Beef, fish, or chicken?

- Decide which class to use (PI, INSTI, NNRTI)
- Choose specific agent based on comorbidities, pill burden, drug interactions, resistance testing, etc.

# PI, InSTI, or NNRTI? (Beef, Fish, or Chicken?)

| <b>PI + RTV or COBI</b><br><b>(Beef + MSG)</b>  | <b>INSTI</b><br><b>(Fish)</b>   | <b>NNRTI</b><br><b>(Chicken)</b>   |
|---|---|--|
| <p><b>PRO</b></p> <ul style="list-style-type: none"> <li>•Very strong, potency well established</li> <li>•Harder to get resistance</li> <li>•Best for patients with uncertain adherence or if resistance tests not available</li> </ul> | <p><b>PRO</b></p> <ul style="list-style-type: none"> <li>•Highly effective for most patients</li> <li>•Very few side effects</li> <li>•Less drug interactions</li> <li>•Less resistance seen with dolutegravir or bictegravir (strong, potent)</li> <li>•Dolutegravir or bictegravir can be used if resistance tests not available</li> </ul> | <p><b>PRO</b></p> <ul style="list-style-type: none"> <li>•Efavirenz: minimal drug interactions w/ rifamycins</li> <li>•Doravirine: less drug interactions, can take with or without food</li> <li>•Rilpivirine is in smallest single tablet regimen</li> </ul>   |
| <p><b>CON</b></p> <ul style="list-style-type: none"> <li>•Many drug interactions (P450 metabolism)</li> <li>•Metabolic effects (↑ cholesterol, glucose)</li> <li>•GI side effects</li> <li>•Boosting required</li> </ul>                | <p><b>CON</b></p> <ul style="list-style-type: none"> <li>•Some delicate, prone to resistance (e.g., raltegravir, elvitegravir)</li> <li>•Weight gain (e.g. bictegravir, dolutegravir, especially when used with tenofovir alafenamide)</li> </ul>   | <p><b>CON</b></p> <ul style="list-style-type: none"> <li>•Prone to resistance</li> <li>•Efavirenz has CNS side effects</li> <li>•Doravirine comes co-formulated only with TDF/3TC</li> <li>•Oral rilpivirine has lower efficacy in some patients (use only if CD4&gt;200 and VL&lt;100,000) and requires acidic environment for absorption</li> </ul>  |

# The Importance of Drug Interactions

- Common drug interactions occur between ART and medications used to manage common comorbidities
- Drug interactions range from mild to severe (and even potentially fatal, requiring FDA labeling to prohibit co-administration)
- Ask about all medications: prescription, over-the-counter, herbal, recreational
  - The INSTIs bicitgravir, dolutegravir, & raltegravir have the fewest drug interactions
  - Regimens containing cobicistat or ritonavir as boosters have a high potential for drug interactions
- Any changes to the medication list require careful consideration of potential drug interactions

# ARV Metabolism and Drug Interaction Potential

| ARV Drug Class       | Route of Metabolism   | Drug Intxn Potential |
|----------------------|---|----------------------|
| NRTI                 | Mostly renal  | Medium               |
| NNRTI                | Liver metabolism: P450 substrates, some are P450 inducers   | High                 |
| PI                   | Liver metabolism: P450 substrates, most are P450 inhibitors   | High                 |
| Integrase Inhibitors | Liver metabolism<br><ul style="list-style-type: none"> <li>•Raltegravir: UGT1A1 enzyme (not P450)</li> <li>•Elvitegravir: P450 substrate (cobicistat: P450 inhibitor)</li> <li>•Dolutegravir: P450 substrate &amp; UGT1A1</li> <li>•Bictegravir: P450 substrate &amp; UGT1A1</li> </ul>   | Medium-High          |
| Entry Inhibitors     | <ul style="list-style-type: none"> <li>•Maraviroc: Liver metabolism: P450 substrate</li> <li>•Fostemsavir: Liver metabolism: P450 substrate</li> <li>•Enfuvirtide: Peptide undergoes catabolism to amino acids: No known drug interactions</li> <li>•Ibalizumab: Metabolized by CD4 receptor internalization/ catabolism: No known drug interactions</li> </ul> | Low-Medium           |

# Antiretrovirals Have Drug Interactions With Multiple Medications

- Cholesterol medications
- Anti-acid therapy
- TB medications
- Hormonal contraceptives
- Asthma medications and corticosteroids
- Seizure medications
- Hepatitis C medications
- Other antiretrovirals
- Antifungals
- Benzodiazepines
- Antiplatelets & anticoagulants
- Erectile dysfunction medications
- Antiarrhythmics, calcium channel blockers
- Antipsychotics and antidepressants
- Herbal and dietary supplements

# ARV Interactions with Cholesterol Medications

- Statins (HMG Co-A reductase inhibitors)
  - P450 substrates
    - Degree of 3A4 metabolism varies:  
simva, lova >> rosuva > atorva > pitava > pravastatin
  - May be affected by NNRTIs, PIs, & cobicistat
- NNRTIs can ↓ statin levels
  - Monitor statin efficacy, ↑ dose as necessary
- PIs and COBI ↑ statin levels
  - Avoid simvastatin, lovastatin (2000% ↑)
  - Myopathy including rhabdomyolysis

# Managing ARV Interactions with Statins

| Statin       | Interacting Antiretroviral(s)   | Prescribing Recommendation  |
|--------------|---|---|
| Atorvastatin | •Atazanavir ± ritonavir   | Titrate atorvastatin dose carefully and use lowest dose necessary while monitoring for toxicities |
|              | •Darunavir/cobicistat<br>•Darunavir + ritonavir<br>•Elvitegravir/cobicistat<br>•Lopinavir/ritonavir | Do not exceed 20 mg atorvastatin daily  |
|              | •Atazanavir/cobicistat<br>•Tipranavir + ritonavir   | Do not co-administer  |
| Lovastatin   | •HIV protease inhibitors<br>•Elvitegravir/cobicistat  | CONTRAINDICATED   |
| Pitavastatin | •HIV protease inhibitors  | No dose adjustment necessary  |
|              | •Elvitegravir/cobicistat  | No data; no dosage recommendation   |
| Pravastatin  | •Atazanavir + ritonavir; Atazanavir/cobicistat<br>•Darunavir + ritonavir; Darunavir/cobicistat      | Titrate pravastatin dose carefully while monitoring for toxicities                                |
|              | •Lopinavir + ritonavir  | No dose limitations   |
|              | •Elvitegravir/cobicistat  | No data; no dosage recommendation   |
| Rosuvastatin | •Darunavir + ritonavir<br>•Elvitegravir/cobicistat  | Titrate rosuvastatin dose carefully and use lowest necessary dose while monitoring for toxicities |
|              | •Darunavir/cobicistat   | Do not exceed 20 mg rosuvastatin daily  |
|              | •Atazanavir/cobicistat<br>•Atazanavir + ritonavir<br>•Lopinavir/ritonavir                           | Do not exceed 10 mg rosuvastatin daily  |
|              | •Tipranavir + ritonavir   | No dose limitations   |
| Simvastatin  | •HIV protease inhibitors<br>•Elvitegravir/cobicistat  | CONTRAINDICATED   |

# Summary

- ART recommended for all HIV+
  - Treatment goals achievable by using viral resistance testing, maximizing adherence, and selecting individualized ART regimen
- Initial ART = 1-2 NRTIs + INSTI or PI or NNRTI  
(1-2 scoops of rice + 1 main entrée)
- ART presents high potential for drug interactions due to the way the medications are absorbed and metabolized

# AETC Program National Centers and HIV Curriculum

- **National Coordinating Resource Center** – serves as the central web –based repository for AETC Program training and capacity building resources; its website includes a free virtual library with training and technical assistance materials, a program directory, and a calendar of trainings and other events. Learn more: <https://aidsetc.org/>
- **National Clinical Consultation Center** – provides free, peer-to-peer, expert advice for health professionals on HIV prevention, care, and treatment and related topics. Learn more: <https://nccc/ucsf.edu>
- **National HIV Curriculum** – provides ongoing, up –to-date HIV training and information for health professionals through a free, web –based curriculum; also provides free CME credits, CNE contact hours, CE contact hours, and maintenance of certification credits.
